

AMENDMENT TO THE CLAIMS

1. to 10. (Canceled)

11. (Original) A computer-readable medium storing computer-executable process steps to provide a digital camera toolbox, the process steps comprising:

- a displaying step to display a toolbox window, the toolbox window including a settings button, a downloading button, a viewing button, a printing button, and an uploading button;
- a controlling step to control settings of a digital camera in a case the settings button is selected;
- a viewing step to view all thumbnail image files stored in the camera in a case the viewing button is selected;
- a downloading step to download all full-resolution image files stored in the camera in a case the downloading button is selected;
- a printing step to print a contact sheet of selected thumbnail image files stored in the camera in a case the printing button is selected; and
- an uploading step to upload all full-resolution image files stored in the camera to an internet service provider in a case the uploading button is selected.

12. (Original) A computer-readable medium according to Claim 11, wherein the controlling step includes a step to control download and upload parameters.

13. (Original) A computer-readable medium according to Claim 11, wherein the downloading step comprises a downloading step to download all thumbnail image files stored in the camera.

14. (Original) A computer-readable medium according to Claim 11, wherein the downloading step comprises a downloading step to download all sound files stored in the camera.

15. to 25. (Canceled)

26. (New) A method to provide a digital camera toolbox, the process steps comprising:

displaying a toolbox window, the toolbox window including a settings button, a downloading button, a viewing button, a printing button, and an uploading button;
controlling settings of a digital camera in a case the settings button is selected;

viewing all thumbnail image files stored in the camera in a case the viewing button is selected;

downloading all full-resolution image files stored in the camera in a case the downloading button is selected;

printing a contact sheet of selected thumbnail image files stored in the camera in a case the printing button is selected; and

uploading all full-resolution image files stored in the camera to an internet service provider in a case the uploading button is selected.

27. (New) A method according to Claim 26, wherein the step of controlling includes a step of controlling download and upload parameters.

28. (New) A method according to Claim 26, wherein the step of downloading comprises downloading all thumbnail image files stored in the camera.

29. (New) A method according to Claim 26, wherein the step of downloading comprises downloading all sound files stored in the camera.

30. (New) An apparatus comprising:
a program memory for storing processing steps executable to: display a toolbox window, the toolbox window including a settings button, a downloading button, a viewing button, a printing button, and an uploading button, control settings of a digital camera in a case the settings button is selected, view all thumbnail image files stored in the camera in a case the viewing button is selected, download all full-resolution image files stored in the camera in a case the downloading button is selected, print a contact sheet of selected thumbnail image files stored in the camera in a case the printing button is selected;

and upload all full-resolution image files stored in the camera to an internet service provider in a case the uploading button is selected; and

a processor for executing the process steps stored in said program memory.

31. (New) Computer-executable program code according to Claim 30, wherein the computer-executable program code to control includes computer-executable program code to control download and upload parameters.

32. (New) Computer-executable program code according to Claim 30, wherein the computer-executable program code to download comprises program code to download all sound files stored in the camera.

33. (New) Computer-executable program code according to Claim 30, wherein the computer-executable program code to download comprises program code to download all sound files stored in the camera.

34. (New) Computer-executable program code stored on a computer-readable medium, said computer-executable program code to provide a digital camera toolbox, said computer-executable program code comprising program code executable to: display a toolbox window, the toolbox window including a settings button, a downloading button, a viewing button, a printing button, and an uploading button, control settings of a digital camera in a case the settings button is selected, view all thumbnail image files stored in the camera in a case the viewing button is selected, download all full-resolution image

files stored in the camera in a case the downloading button is selected, print a contact sheet of selected thumbnail image files stored in the camera in a case the printing button is selected; and upload all full-resolution image files stored in the camera to an internet service provider in a case the uploading button is selected.

35. (New) An apparatus according to Claim 34, wherein the computer-executable program code to control includes computer-executable program code to control download and upload parameters.

36. (New) An apparatus according to Claim 34, wherein the computer-executable program code to download comprises program code to download all sound files stored in the camera.

37. (New) An apparatus according to Claim 34, wherein the computer-executable program code to download comprises program code to download all sound files stored in the camera.

38. (New) An apparatus comprising:
means for detecting a connection to a device; and
means for controlling an output of at least one of a plurality of icons for obtaining an image in the device, uploading an image in the device to internet, and setting the device, in case that the connection to the device is detected.

39. (New) An apparatus according to Claim 38, wherein the means for controlling further includes means for controlling an output of the plurality of icons together in a window.

40. (New) A method of image processing for an image processing apparatus which is able to manipulate image data in a device, the method comprising the steps of:

detecting a connection to a device; and

controlling an output of at least one of a plurality of icons for obtaining an image in the device, uploading an image in the device to internet, and setting the device, in case that the connection to the device is detected.

41. (New) A computer-executable program, said computer-executable program comprising the steps of:

detecting a connection to a device; and

controlling an output of at least one of a plurality of icons for obtaining an image in the device, uploading an image in the device to internet, and for setting the device, in case that the connection to the device is detected.

42. (New) A computer-readable medium storing computer-executable program, the computer-executable program comprising the steps of:

detecting a connection to a device; and

controlling an output of at least one of a plurality of icons for obtaining an image in the device, uploading an image in the device to internet, and setting the device, in case that the connection to the device is detected.

43. (New) An apparatus comprising:

means for detecting a connection to a device; and

means for controlling an output of an icon, in a predetermined area, to show the device, in case that the connection to the device is detected.

44. (New) An apparatus according to Claim 43, wherein the means for

controlling further includes means for controlling an output of a menu to control the device.

45. (New) An apparatus according to Claim 43, wherein the

predetermined area is different from a taskbar area.

46. (New) A method of image processing for an image processing

apparatus which is able to manipulate image data in a device, the method comprising the steps of:

detecting a connection to a device; and

controlling an output of an icon, in a predetermined area, to show the device, in case that the connection to the device is detected.

47. (New) A computer-executable program comprising the steps of:
detecting a connection to a device; and
controlling an output of an icon, in a predetermined area, to show the
device, in case that the connection to the device is detected.

48. (New) A computer-readable medium storing computer-executable
program, the computer-executable program comprising the steps of:
detecting a connection to a device; and
controlling an output of an icon, in a predetermined area, to show the
device, in case that the connection to the device is detected.

49. (New) An apparatus for image processing to browse an image in a
device, comprising:
means for determining whether the image is loaded or unloaded; and
means for controlling an output of information showing the image has been
loaded, in case it is determined that the image is loaded.

50. (New) An apparatus according to Claim 49, wherein the means for
controlling further includes means for outputting together both the image and an icon
showing the image has been loaded.

51. (New) A method for image processing to browse an image in a
device, the method comprising the steps of:

determining whether an image is loaded or unloaded; and
controlling an output of an icon to shown the device in a predetermined
area, in case it is determined that the image is loaded.

52. (New) A computer-executable program comprising the steps of:
determining whether an image is loaded or unloaded; and
controlling an output of an icon to show the device in a predetermined area,
in case it is determined that the image is loaded.

53. (New) A computer-readable medium storing a computer-executable
program, the computer-executable program comprising the steps of:
determining whether an image is loaded or unloaded; and
controlling an output of an icon to show the device in a predetermined area,
in case it is determined that the image is loaded.
